

Nüsing Premium surfaces –  
all that glitters can be gold!

The culture centre in Ugingen impresses its visitors with a plain and yet architecturally demanding design. Take the suspended concrete staircase or the

ceiling-high Nüsing partition wall, for example. And so where better to add colour to round off a truly golden example of what modern architecture

and interior design can achieve. What's more, with the large glass window at the front, you don't even have to go inside to appreciate its beauty.

## Finish it off in style.

The finish of a movable wall is at least as important as its functionality, when it comes to creating the perfect interior design. Do you want a finish to play a dominating role or rather just blend into the background? Either way, with Nüsing finishes, you are spoiled for choice.

The panels, measuring from 1.30 m x 2.60 m to 1.30 m x 4.10 m, can be designed individually to create a unique mosaic.

This way you can also highlight, let's say the door panels for example, so they stand out from the rest. See what an amazing effect you can achieve by contrasting colours. Give your building the flair it deserves and with Nüsing's expertise at your side, the sky's the limit.

4

## Dressed to impress

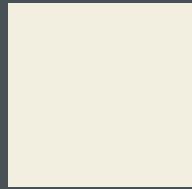

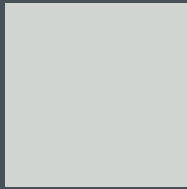

Of course, a partition wall can simply be a large coloured or patterned surface that divides two rooms. On the other hand, it can be a unique creation. Something individually designed to what you have in mind, something which impresses. We make everything from standard surfaces to customised surfaces such as aluminium or a digital print. The world is your oyster.

The highly glossy glass surfaces in every possible colour appear like mirrors and make your rooms seem twice as big.

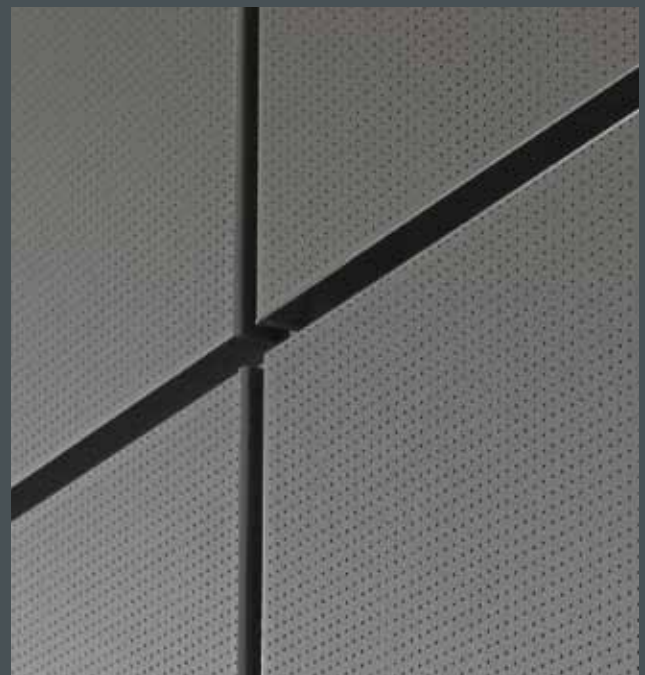

Keep the noise down with our micro-perforated acoustic panels, which absorb the sound and prevent echo effects.

## Sound surfaces

Panel surfaces finish off your rooms both visually and acoustically. They look good; they feel good; they even sound good. Trust in your senses when choosing your design. Nüsing Premium walls are not off-the-shelf products, but are individually designed to meet your needs and wishes.

In concert halls, the right acoustics is everything. Give your musicians the highest-quality environment to play in and they'll make that night one to remember.

You don't always have to see what you can hear. Only when you get close up, can you just make out the perforations on the surface of our micro-perforated acoustic panels. The effect, however, can be heard in the whole room.
