SOCKET **ELLIPSYS®**

ELLIPSYS

Design

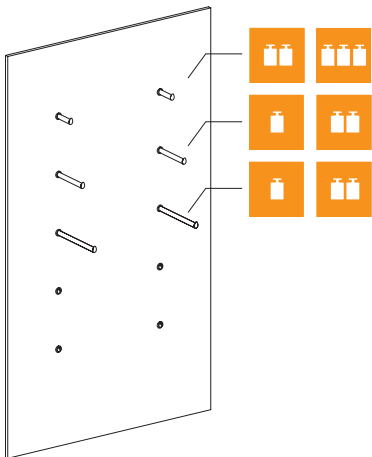

ELLIPSYS® is an original solution for professionals in search of a socket display system. It has been designed as a polycarbonate plug to fit in standard panels without backside fixing or locking. The patented technique of the ELLIPSYS® socket allows choosing between drilling on site or in the workshop with digital machines. A specific tool guarantees perfect fixing of the socket to the panel. To satisfy the most demanding designers SOFADI proposes a simple and unobtrusive kit for glass panels.

Material

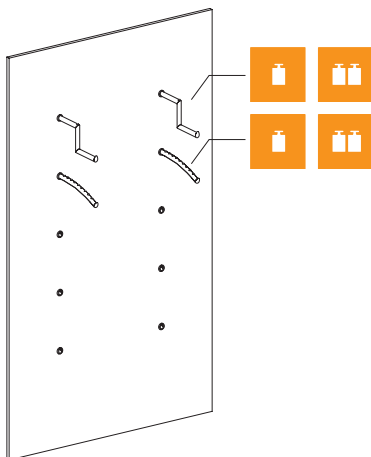

The accessories of the ELLIPSYS® system have been designed with an eye on transparency and brightness. The chosen materials are bright chromium-plated steel for the structure and polycarbonate combining crystal and ground glass aspect for the linking and finishing parts. The range of ELLIPSYS® accessories meets the basic requirements of present-day merchandising.

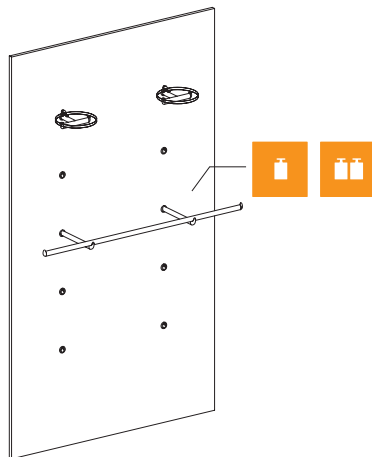

MERCHANDISING

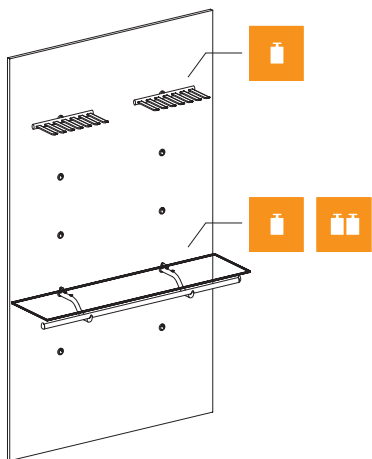

- Straight facing 100, 200, or 300 mm

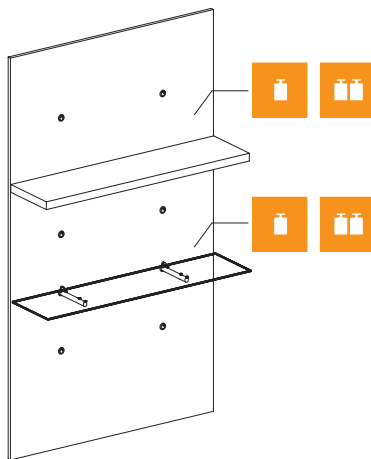

- Bent facing
- 2-level facing
